

Professional-grade cost estimating and jobsite project management solution

The EDGE® Estimator is a commercial estimating software that provides an end-to-end automated solution for both takeoff and estimating. And EDGE On Site® is the only mobile app that tracks production directly from the original estimate.

How It Works:

Ι.

Takeoff the project blueprint by clicking the screen with your mouse and choosing materials from pre-built assemblies.

2.

In the estimating screen, The EDGE pre-populates all materials, their costs and labor rates. Simply, verify or edit.

3.

When complete, use reports to help with project management, accounting and communication with customers.

Once your job is awarded, monitor completed progress on a real-time basis and track hourly employees time with EDGE On Site. This ground-breaking mobile app is used in the field to track labor against the original estimate.

Market Leading Features:

€ All-In-One Solution

The EDGE® Estimator combines professional-grade takeoff and estimating together so it functions more smoothly than other market solutions, you won't ever say, "Sometimes it breaks and I don't know it." Best of all, while doing a takeoff, the measurements are automatically added into the estimating side and the material list and labor budget are pre-populated. All that's needed is to simply update your quantities and labor rates and verify your estimate.

It's one of the reasons over 60% of users have been customers for over 10 plus years!

😂 Speed, Depth & Accuracy

The first thing you'll discover is The EDGE doesn't compromise. We've spent years streamlining the software and making it quick and intuitive, but not at the expense of delivering a robust solution with the depth to handle job of any size yet still account for every single nail. That kind of accuracy is how you win bids and maximize your profits.

In fact, The EDGE is so comprehensive and precise that we've had experienced professional estimators tell us it actually made them better at estimating.

😑 Trade-Specific Tool with Databases

Finally, software that can really talk shop. The EDGE is not only designed to meet the precise needs of individual trades, but it comes with manufacturer material databases and trade assemblies. Easily customize your software further by adding your own products, labor rates, account codes, markups such as tax rates, overhead and profit and even define if specific jobs are bonded, ensuring that your estimates accurately detail the way your business really works.

😝 Multiple Bid Options or Change Orders

Whether you need to value engineer a bid, create bid variations or prepare a change order, The EDGE[®] can help you envision a variety of scenarios in an instant. Simply copy a scenario and then adjust the materials and labor rates allowing you to create options for your client. The EDGE makes it easy.

😂 Smart Edits

Professional estimators know how things can change. The material that you've specified may become unavailable, or suddenly change in price. The EDGE tracks every element throughout the entire estimate, so that any update is made uniformly wherever that element is referenced across the bid.

😂 Smart Labor® Technology

With the unique Smart Labor® technology calculating production and making sure it's accurate has never been easier. The EDGE automatically generates different labor rates based on conditions that you define. For example, if you need to adhere the membrane to a parapet wall that requires a ladder or scaffolding, Smart labor thinks like a contractor and calculates the additional labor rate. And the more estimates you create, the more precise it becomes!

You'll wonder how you ever estimated without it.

Advanced Cloud Reporting

The EDGE not only creates extremely accurate estimates, but users love the thoroughness of the reports. Use them to help with project management, accounting and communication with customers. And they are easily customizable to get the information you need, when you need it.

Bid sharp. Build sharp.
